Production Possibilities: Refining the Model

55)

In the linear production possibilities model, we assume each of five equally sized parcels of land contributes the same to the production of food and timber: 6 units of timber or 3 units of food.

By contrast, in the non-linear model, we will assume that there are five different types of land in equal-sized plots and that each plot may contribute as follows to the production of food or timber:

Plot	Production Quality	Potential	Contribution
(A plot can be used for either food or timber.)		Food	Timber
1	Great farmland/Terrible timberland	+5 food units	+2 timber units
2	Good farmland/Poor timberland	+4 food units	+4 timber units
3	Moderate farmland/Moderate timberland	+3 food units	+6 timber units
4	Poor farmland/Good timberland	+2 food units	+8 timber units
5	Terrible farmland/Great timberland	+1 food unit	+10 timber units

Assuming all parcels of land are the same, when all land is in use, one more unit of timber produced will require:

55) _____

Essentials of Economics 11th Edition by Schiller CH01

- A) Two more units of food produced
- B) Five fewer units of food produced
- C) One-half fewer units of food produced
- D) Two fewer units of food produced

Learning Objective: 01-01 Explain the meaning of scarcity.

Topic: The Central Problem of Scarcity

Bloom's : Remember Difficulty : 1 Easy

ESSAY. Write your answer in the space provided or on a separate sheet of paper.

148) Explain opportunity cost. Give one example of an opportunity cost.

Question Details

AACSB: Reflective Thinking Accessibility: Keyboard Navigation

Bloom's : Understand Difficulty : 2 Medium

Topic: The Central Problem of Scarcity

Learning Objective: 01-02 Define "opportunity cost."

149) What are the factors of production? How do these factors play a role in an economy answering the Three Basic Economic Questions?

Essentials of Economics 11th Edition by Schiller CH01

Question Details

AACSB : Reflective Thinking Accessibility : Keyboard Navigation

Bloom's : Understand Difficulty : 2 Medium

Learning Objective: 01-03 Recite society's three core economic questions.

Topic: Three Basic Economic Questions

150) Define market mechanism and discuss Adam Smith's explanation of the "invisible hand."

Question Details

AACSB : Reflective Thinking Accessibility : Keyboard Navigation

Bloom's : Understand Difficulty : 2 Medium

Learning Objective: 01-04 Discuss how market and command economies differ.

Topic: The Mechanisms of Choice

Essentials of Economics 11th Edition by Schiller CH01

Answer Key

Test name: CH01

1) TRUE

Economics is the study of how to allocate scarce resources among various uses.

2) FALSE

The opportunity cost of a good is the sacrifice of the next-best alternative goods that are forgone. Since a choice implies an option not taken, all choices come with opportunity costs.

3) FALSE

All factors of production, or resources, are finite.

4) FALSE

The resources of the United States are not sufficient to meet the desires of all its citizens.

5) TRUE

No economy can escape scarcity.

6) FALSE

Not all desires of every citizen are met.

7) TRUE

The Three Basic Economic Questions are WHAT, FOR WHOM, and HOW.

8) FALSE

The factors of production include land, labor and capital.

9) TRUE

Essentials of Economics 11th Edition by Schiller CH01

Capital is a good (or goods) used to produce other goods.

10) TRUE

All resources are being used efficiently.

11) FALSE

Economic growth will expand the production possibilities outward, allowing more production and thus shifting the production possibilities curve outward.

12) TRUE

Investment is necessary for growth.

13) TRUE

FOR WHOM question address issues of distribution and who will get what share of goods and services.

14) TRUE

No direct communication is needed between the producer and the consumer.

15) TRUE

Adam Smith preferred little or no government intervention.

16) FALSE

Because the United States uses a combination of government directives and market mechanisms to determine economic outcomes, the United States is a mixed economy.

17) FALSE

Karl Marx believed central planning was necessary to keep workers from being exploited.

18) FALSE

Essentials of Economics 11th Edition by Schiller CH01

A mixed economy relies on both market signals and government directives to allocate goods and services.

19) TRUE

An externality places the burden on a third party.

20) TRUE

Government intervention does not always result in a positive outcome.

21) FALSE

The focus of economics is on basic relationships, ignoring unnecessary details. Therefore, theories, or models of economic behavior are possible to formulate.

22) FALSE

With limited resources, it is impossible to satisfy everyone's needs. The optimal mix would be the best combination of output from scarce resources that could meet as many needs possible.

23) B

There are only a finite amount of resources, so there are not enough to meet all human desires.

24) C

There are not enough resources for everyone to have all that they desire.

25) A

The factors of production and the resources used to make goods and services are finite.

26) C

The goal of economic theory is to figure out how to use scarce resources in the best possible way.

27) A

Essentials of Economics 11th Edition by Schiller CH01

The opportunity cost is the value of the next best alternative that is given up when we make a choice.

28) C

Resources required in the production of desired goods and services are limited so there is an opportunity cost for every production decision.

29) C

In this case, an opportunity cost is an opportunity lost due to scarce time.

30) D

If no resources were scarce, consumers would not have to make choices. This would also mean that humans would need to live forever, otherwise time is always a scarce resource.

31) C

Available resources always fall short of our desires.

32) A

The more advanced our technological and managerial abilities, the more output we will be able to produce with available factors of production.

33) C

All factors of production are finite in quantity.

34) B

Given that resources are finite, consumers will not be able to have everything they desire.

35) A

With finite factors of production, society must decide what is best to produce for the majority of the population.

36) D

Essentials of Economics 11th Edition by Schiller CH01

The "WHAT" question of economics asks which goods or services to produce that would best benefit society.

37) B

In economics, capital is referred to as the goods that are used to make goods. Money is not a factor of production.

38) C

Capital would include items such as machinery, buildings, and networks. Money is not economic capital.

39) B

Capital refers to goods that are used to produce other goods. In this example, the computer is the good used to produce the document which is the other good.

40) D

A homebuilder would be an example of a labor resource.

41) B

Labor is the number and skills of workers.

42) D

Entrepreneurship is skill in creating products, services, and processes. An entrepreneur uniquely combines the other three factors of production to make a good or service.

43) B

Entrepreneurship is defined as the ability to create products, services, and processes.

44) C

With limited factors of production and technology, output would have a finite limit.

Essentials of Economics 11th Edition by Schiller CH01

45) C

In this case guns represent military spending while butter represents consumer goods.

46) C

Seventeen thousand houses are built when two missiles are built. Ten thousand houses are built when three missiles are built. Over this range of production seven thousand houses are sacrificed so that an additional missile can be produced.

See Table 1.1 in the textbook.

47) B

The difference in the production of 17,000 houses to 21,000 houses is 4,000. The difference between the number of missiles produced is one. Therefore the opportunity cost of increasing the production of houses from 17,000 to 21,000 in terms of missiles per house is 0.00025, or 1/4,000.

See Table 1.1 in the textbook.

48) A

When 10,000 houses are built the cost is 1 missile. Therefore, the opportunity cost of a house over this range is 0.00010 missiles, or 1/10000 missiles.

See Table 1.1 in the textbook.

49) D

The creation of 1 missile creates the highest cost at 10,000 houses. This is the opportunity cost of producing the fourth missile given an economy is already producing three (moving from combination K to combination J).

See Table 1.1 in the textbook.

50) A

No country has an infinite amount of resources.

Essentials of Economics 11th Edition by Schiller CH01

51) B

The production possibilities curve represents the alternative combinations of goods and services that could be produced in a given time period with all available resources and technology. Price is not a factor.

52) A

A production possibilities curve describes the various combination of final goods or services that could be produced in a given time period with available resources and technology.

53) D

Because of limited resources the increase in military production will decrease the production of consumer goods. This would represent a movement along a given production possibilities curve since the fundamental ability of North Korea to produce has not changed (and so the curve would not shift).

54) C

Because of limited resources the decrease in military production will increase the production of consumer goods. This would represent a movement along a given production possibilities curve since the fundamental ability of France to produce has not changed (and so the curve would not shift).

- 55) C
- 56) D
- 57) A
- 58) A
- 59) A
- 60) C
- 61) B

Essentials of Economics 11th Edition by Schiller CH01

There is no single point on the production possibilities curve that is right for all nations at all times unless all nations have identical preferences.

62) A

Locating and producing the optimal mix of output is the essence of the WHAT challenge, answering the question of what to produce.

63) D

Economic investments enhance the ability to produce.

64) C

Lottery is a game of chance and is not an investment, which should expand the ability of a firm to produce its output.

65) A

Economic growth expands the possibilities to produce more.

66) C

Production possibilities increase and shift outward with growth in resources and technology.

67) C

Outward shifts of the production possibilities curve occur with growth. Growth is due to improved technologies which use fewer resources and/or an increase in resources.

68) A

Investment in new technologies is necessary to economic growth.

69) B

A change in technology allows for resources to be used more efficiently.

70) C

Prices are not a factor in growth because they do not represent resources or technology.

Essentials of Economics 11th Edition by Schiller CH01

71) A

Labor is a factor of production. If there is a reduction of labor, production possibilities decrease.

72) D

In this scenario, loss of industrial centers creates a reduction in capital which would cause production to decrease.

73) C

When all resources are not used to their fullest capacity, production falls below the curve. See Figure 1.1 in the textbook.

74) C

Point C falls below the production possibilities curve, which indicates some resources are not being used to the fullest potential.

See Figure 1.1 in the textbook.

75) B

Point B is a point along the production-possibilities curve, indicating that society is efficiently using all resources to produce office buildings and housing.

See Figure 1.1 in the textbook.

76) A

If new resources are discovered the production possibilities curve shifts to the right. See Figure 1.1. in the textbook.

77) A

There are not sufficient recourses or technology to produce at this level of office buildings or housing.

See Figure 1.1 in the textbook.

78) D

At point D there is no production of houses nor of office buildings.

See Figure 1.1 in the textbook.

79) B

The best possible answer to the HOW question will entail both efficiency in the use of factors of production and adequate safeguards for the environment and other social concerns.

80) A

Essentials of Economics 11th Edition by Schiller CH01

Everyone wants a slice of the "economic pie" that would best fit their needs. Because the pie is limited, we must choose how to allocate what is produced.

81) B

The optimal distribution of income and output must satisfy our sense of fairness and as well as our desire for more. Welfare programs are implemented to redistribute income or output to better match our view of who should receive what.

82) B

The use of market prices and sales to signal desired outputs. These prices are generated in markets, which largely determine how goods and services are allocated.

83) C

The market mechanism signals to producers what products consumers demand.

84) D

Prices and sales indicate to producers what they should continue to produce.

85) B

Price and sales send signals to producers about what mix of output consumers want.

86) B

Price and sales send signals to producers about what mix of output consumers want.

87) A

No direct communication between consumer and producer is required to signal what market participants want.

Essentials of Economics 11th Edition by Schiller CH01

88) B

Price is a determining factor for consumers to buy and producers to sell.

89) C

Laissez faire means "hands off," which invites the government to stay out of the market decisions.

90) D

Laissez faire means "hands off," which invites the government to stay out of the market decisions.

91) A

Adam Smith argued that nations would prosper with less government interference.

92) B

The government, not the market, assumes responsibility for answering the three basic economic questions.

93) A

Karl Marx proposed serious faults with market-based economies.

94) D

Central planning is still the principal mechanism of choice in some countries that still tend to be Communist.

95) C

The U.S. uses a mix of market mechanism and government directives to make economic choices.

96) C

The government is not a business and does not seek profits.

97) A

The market may not always pick the best possible mix of output.

Essentials of Economics 11th Edition by Schiller CH01

98) B

The market did not produce the best possible mix of outputs.

99) A

An externality is a cost imposed on innocent third parties.

100) C

The cancer was a result of pollution and borne by a third party.

101) B

When the market mechanism selects the wrong choice of HOW to produce, this will cause a market failure.

102) A

The government may not necessarily offer better answers to the three basic questions.

103) A

Government intervention might not just worsen the mix of output but even reduce the total amount of output.

104) B

An increase in bureaucratic red tape may burden private industry and reduce the total amount of output.

105) A

Macroeconomics focuses on the behavior of an entire economy—the big picture.

106) D

The essential concern of macroeconomics is to understand and improve the performance of the economy as a whole.

107) B

Essentials of Economics 11th Edition by Schiller CH01

Microeconomics focuses on individuals, firms, and government agencies.

108) A

One focus of microeconomics is on individual firms.

109) C

One focus of microeconomics is on individual firms.

110) D

There are too many factors that contribute to economic theory; exact economic outcomes cannot be determined.

111) B

Models are used like maps to show basic relationships.

112) D

The assertion is that all things remain equal except for one. This assumption is made to better isolate the relationship between two variables.

113) C

Only one circumstance will change in a model; all other circumstances will remain constant.

114) A

Economic growth is essential for future generations to continue to enjoy a higher standard of living than previous generations.

115) B

With a reduction in food production there are more resources to produce military goods. This leads to a movement along the production possibilities curve.

116) A

Essentials of Economics 11th Edition by Schiller CH01

Resources used for the military aren't available for producing food. This is an opportunity cost of the production of missiles.

117) C

Resources used for the military aren't available for producing food. This is an opportunity cost to the production of missiles in terms of food.

118) D

Government intervention may fail to improve market outcomes.

119) B

A government failure may result in a less desirable mix of output.

120) B

The horizontal and vertical axes identify the variables being analyzed, which is critical to understanding what a graph is showing.

121) A

Divide the vertical distance between the two points, by the horizontal distance between the two points. By doing this, we scale how much the variable on the vertical axis changes whenever the variable on the horizontal axis changes by one unit.

122) D

Slope is calculated as the rise divided by the run.

123) B

Shifts are reflective of changes in the underlying relationships between the two variables.

124) C

A distinguishing feature of linear curves is that they have the same slope throughout and so they appear straight on a graph.

125) B

Essentials of Economics 11th Edition by Schiller CH01

A negative relationship among the variables produces a negatively-sloped curve.

126) A

Variables on both axes are moving upward to the right.

127) B

This would imply that if one variable increases, so too does the other.

128) C

A grade of 3.0 intersects with 30 hours of study time.

See Figure A.1 in the textbook.

129) A

A grade of 1.0 intersects with 10 hours of study time.

See Figure A.1 in the textbook.

130) B

The line is straight until approximately 4.0 then moves downward.

See Figure A.1 in the textbook.

131) B

A grade of 3.0 intersects with 30 hours.

See Figure A.1 in the textbook.

132) C

A grade of 2.0 intersects with 20 hours.

See Figure A.1 in the textbook.

133) A

A point between 3.5 and 4.0 intersects with 40 hours.

See Figure A.1 in the textbook.

134) B

The intersection of 3.0 and 30 hours implies that someone studying 30 hours would a grade of 3.0.

See Figure A.1 in the textbook.

135) C

Karl Marx felt that private property ownership would increase inequality within society and lead to capitalism's downfall.

136) D

Essentials of Economics 11th Edition by Schiller CH01

Both of these things are true of scarcity.

137) D

Scarcity forces us to choose between alternative uses of a resource; even if there is no monetary cost to a choice, we must pick the "best" use of the resource and give up the next alternative.

138) C

Factors of production are the resource inputs used to produce goods and services.

139) B

Opportunity cost is described by the value of goods or services you give up in order to obtain something.

140) A

What to produce refers to choosing the mix of output.

141) B

Economic growth involves an outward shift of production possibilities, but none of the other options are true.

142) A

The price of the good is the determining factor in a market. Prices induce both consumers and producers to alter their behavior. The quantity supplied and quantity demanded are determined by price, so that cannot be a correct answer.

143) B

As firms see the sales and prices of certain goods rise, they will produce more of these goods.

144) D

Essentials of Economics 11th Edition by Schiller CH01

Each of these answers illustrates an externality that causes too much or too little of a product to be provided by the market.

145) D

Market failure is described by both of these.

146) D

Survey results revealed increasingly pessimistic views about the economy and many adults were concerned that economic growth would not positively impact their children.

147) C

Survey results revealed increasingly pessimistic views about the economy and many adults were concerned that economic growth would not positively impact their children.

- 148) An opportunity cost is the value of the second best choice. Example: A student stays home to study for an exam instead of going to a movie with friends. (Answers may vary)
- 149) The factors of production are Land, Labor, Capital, and Entrepreneurship. Each factor of production plays a role in answering the WHAT, HOW, and FOR WHOM questions by distributing scarce resources in the best possible way. (Answers may vary)
- 150) The market mechanism is central in reshuffling resources and outputs. Market sales and prices send a signal to producers about what mix of output consumers want. Without direct communication between consumers and producers the "invisible hand" communicates sales and prices.
